

KVH Neurology

Neurology deals with disorders of the nervous system, which include the brain, blood vessels, muscles and nerves.

We treat these conditions:

- Adult ADHD and cognitive problems
- Alzheimer's disease and other dementias
- Amyotrophic Lateral Sclerosis (ALS, Lou Gehrig's Disease)
- Brain trauma and other injuries of the nervous system
- Brain tumors
- Dementia
- Diabetic neuropathy
- Epilepsy
- Certain problems of eye movement and vision
- Migraines and other headache disorders
- Multiple Sclerosis
- Disorders of the brain, spinal cord
- Parkinson's disease
- Seizures
- Sleep disorders
- Spasticity and other movement disorders
- Spine disorders
- Stroke
- Tourette's Syndrome and other disorders of involuntary movement
- Trigger point injections, nerve blocks for certain types of pain
- Botulinum toxin therapy for migraine/movement disorders

Your primary care physician may refer you to us if you are experiencing one or more of the following symptoms:

- Headaches
- Chronic pain related to nerve problems
- Dizziness and balance problems
- Numbness or tingling
- Weakness
- Movement problems
- Seizures or loss of consciousness
- Vision problems
- Memory problems or confusion
- Sleep problems
- Speech or language difficulties
- Vision problems and double vision

People who are having problems with their senses such as vision, smell, taste or touch, may also be referred to a neurologist, as sensory dysfunction is sometimes caused by disorders of the nervous system.

Meet our provider.

With over 30 years of neurology experience, Dr. Andrew Gustavson grew up in agricultural areas, and has a particular interest in helping people from rural communities. He strongly supports a community approach to health care.

"I am dedicated to compassionate care, and highly value enduring relationships with my patients. My practice is based on the therapeutic alliance: a physician and patient working together to solve problems. This is always unique to each patient and situation. It involves listening to people with empathy, spending time explaining diagnosis, treatment and answering questions. Good communication is essential. Many of the problems I treat involve family members and I strive to involve them in the care I deliver." - Dr. Gustavson
